ABSTRACT

The invention relates to a parking fee system that includes comprising: a parking fee register

including means for maintaining parking data and a tariff database. In order to improve user-

friendliness the parking fee register is configured to send application data to a mobile station of a

user of a determined vehicle in response to the reception of the parking data indicating the

commencement of the parking of said the vehicle[[,]]. the The application data including

includes at least a tariff retrieved from the tariff database on the basis of the parking data and the

expiration time of the parking[[,]]. the The application data initiating initiates an application in

the mobile station of the user that offers the user a chance to keep track in real time of at least the

sum of the accrued parking fee and the remaining parking time.
